Practical aspects of deep learning

8/10 points (80.00%)

Quiz, 10 questions

✔ Congratulations! You passed!

Next Item

✔ 1 / 1 points

1.
If you have 10,000,000 examples, how would you split the train/dev/test set?

- 33% train . 33% dev . 33% test
- ◉ 98% train . 1% dev . 1% test

Correct

- 60% train . 20% dev . 20% test

✔ 1 / 1 points

2.
The dev and test set should:

- ◉ Come from the same distribution

Correct

Come from different distributions

Be identical to each other (same (x,y) pairs)

Have the same number of examples

Practical aspects of deep learning

0 / 1 points

3.
If your Neural Network model seems to have high variance, what of the following would be promising things to try?

Make the Neural Network deeper

This should not be selected

Add regularization

This should be selected

Increase the number of units in each hidden layer

This should not be selected

Get more test data

Un-selected is correct

Get more training data

This should be selected

1 / 1 points

Practical aspects of deep learning

Quiz, 10 questions

8/10 points (80.00%)

4.

You are working on an automated check-out kiosk for a supermarket, and are building a classifier for apples, bananas and oranges. Suppose your classifier obtains a training set error of 0.5%, and a dev set error of 7%. Which of the following are promising things to try to improve your classifier? (Check all that apply.)

- [x] Increase the regularization parameter lambda

Correct

- [x] Decrease the regularization parameter lambda

Un-selected is correct

- [x] Get more training data

Correct

- [x] Use a bigger neural network

Un-selected is correct

✔ 1 / 1 points

5.

What is weight decay?

- (●) A regularization technique (such as L2 regularization) that results in gradient descent shrinking the weights on every iteration.

Correct

- ( ) The process of gradually decreasing the learning rate during training.

- ( )

A technique to avoid vanishing gradient by imposing a ceiling on the values of the weights.

Practical aspects of deep learning

8/10 points (80.00%)

Quiz, 10 questions

Gradual corruption of the weights in the neural network if it is trained on noisy data.

✔ 1 / 1 points

6.
What happens when you increase the regularization hyperparameter lambda?

Weights are pushed toward becoming smaller (closer to 0)

Correct

Weights are pushed toward becoming bigger (further from 0)

Doubling lambda should roughly result in doubling the weights

Gradient descent taking bigger steps with each iteration (proportional to lambda)

✖ 0 / 1 points

7.
With the inverted dropout technique, at test time:

You apply dropout (randomly eliminating units) but keep the 1/keep_prob factor in the calculations used in training.

You apply dropout (randomly eliminating units) and do not keep the 1/keep_prob factor in the calculations used in training

This should not be selected

You do not apply dropout (do not randomly eliminate units) and do not keep the 1/keep_prob factor in the calculations used in training

You do not apply dropout (do not randomly eliminate units), but keep the 1/keep_prob factor in the calculations used in training.

Practical aspects of deep learning

8/10 points (80.00%)

Quiz, 10 questions

1 / 1 points

8.
Increasing the parameter keep_prob from (say) 0.5 to 0.6 will likely cause the following: (Check the two that apply)

- [ ] Increasing the regularization effect

Un-selected is correct

- [ ] Reducing the regularization effect

Correct

- [ ] Causing the neural network to end up with a higher training set error

Un-selected is correct

- [ ] Causing the neural network to end up with a lower training set error

Correct

1 / 1 points

9.
Which of these techniques are useful for reducing variance (reducing overfitting)? (Check all that apply.)

- [ ] Vanishing gradient

Un-selected is correct

Practical aspects of deep learning

8/10 points (80.00%)

Quiz, 10 questions

- [ ] Exploding gradient

Un-selected is correct

- [ ] Data augmentation

Correct

- [ ] Dropout

Correct

- [ ] Xavier initialization

Un-selected is correct

- [ ] L2 regularization

Correct

- [ ] Gradient Checking

Un-selected is correct

✔ 1 / 1 points

10.

Why do we normalize the inputs x?

- Normalization is another word for regularization--It helps to reduce variance

It makes the cost function faster to optimize

Practical aspects of deep learning

Correct

8/10 points (80.00%)

Quiz, 10 questions

It makes the parameter initialization faster

It makes it easier to visualize the data
